I want to talk about something I get asked a lot about from men all the time -- “riding face”.

Lovely topic, isn't it?

As this is designed to be a couple's guide, it's written with both men and women in mind. So whoever you are, feel free to read this and take notes, okay?

If you don't know what riding face is, it's basically where you force another person to perform oral sex on you, but the forcefulness used is mutual. The person who's administering the oral sex *wants* to be a part of it, and isn't physically or

emotionally abusive.

Most of the time people will associate riding face with a guy forcing a woman to perform deep oral sex on him. He's moving up or down, or in and out, however you want to say it, while she holds her mouth open and rides it like a vagina.

I know it sounds really rough, but for those who are sexually open minded, it's perfectly fine, and can be very enjoyable. Girls can do the same thing

to men. They spread their legs open, and force the mans face in to their vagina.

Or they can do what's called “face-sitting,” which is when a man is laying on his back and the woman will shove her pussy into a guy's face so he can then gives her oral sex and everybody's happy.

In this guide, though, I'm talking about the art of having a guy perform face riding on a girl. The general concept is that a girl will lay in some kind of

position for a guy to be able to thrust his penis in and out of her mouth vigorously, so that he receives great pleasure, but does not make the woman too uncomfortable.

What I've found is that what works best for myself, might not work best for you since everyone is different and has different levels of comfort and tolerance.

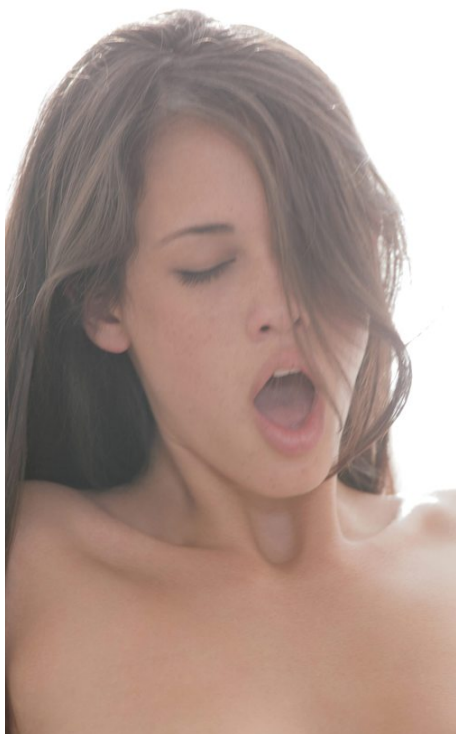

Basically, if a girl lies down horizontally with her back on the bed, and her head hanging slightly off so gravity pulls the top of her head towards the floor, her head will now be tilting back and her mouth open... this will create a channel in her throat for your penis to slide into.

From a female perspective, it can be harder to do than it looks. You think that you just have to sit there and be face fucked, and it's not that big of a deal. But it's a lot harder than it looks. You have grow used to it before you do it without thinking.

Guys can get a bit carried away and become very forceful without realizing, because you basically have to treat it like it's a vagina. So it's best if you use some kind of water based lubricant at first..

But you have to respect the fact that you're going into a mouth, which has gag reflexes. As much as you might want to shove all X amount of inches into her throat, she might not be able to handle it. So you need to establish that boundary well in advance.

But for women, it's hard not to let that gag reflex go. It's hard not to just "bleagh" vomit all over the place at first. I'm not saying that you will, but you've got to have a way to control that. I've found that the easiest way to do it is to let your tongue close off the

back of your throat, to where his penis can't get any further than your tongue.

That provides a little extra texture in the back, and it feels great. It also provides you with a stopping point. If you open your tongue, as if you were going to swallow a pill or something, then you are much more susceptible to having him tap on your gag reflex over and over again. Just one experience with that will automatically make you not want to go through that again.

Whatever you do, don't bite down on his dick. If you are choking, you need to smack his butt cheeks or have some kind of signal so he knows to stop for a second. Even if you go, "Sshtopp" (that's what you'd sound like with a dick in your mouth) if you just do something like that, that's a lot easier than hurting him, because otherwise he's not going to want to do that anymore.

Actually, you may be wondering why women would want to do this in general. It's one

of those things where you, even though you can't directly get sexual pleasure from it, per se, it's still fun to do.

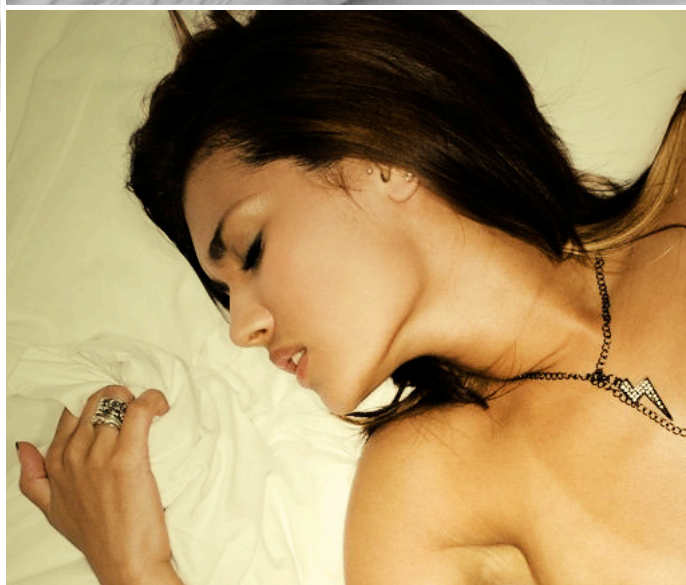

It's just like when a guy eats out a girl. It's the same basic principle. You don't necessarily orgasm from it, but it doesn't mean you can't have fun with it.

Girls can have fun with this too. You can always play with yourself while he's in the middle of doing his thing. It's very easy to do because your hands aren't going to be doing anything anyway, unless you decide to play with his balls or anus.

Chances are you won't have anything to do with your hands, you might as well play with your clit, right? Sounds good!

As for men, you need to be respectful of the boundaries that your girl is putting in place. You still should be able to enjoy a lot of it. If you stand straight up, to where she would be this way and you would be going like that, then you at least get to watch her titties bounce up and down. That's awesome, right?

Then you can also get sort

of arched over, like if you're in the missionary position, that makes it a little bit easier to control what you're doing, because you have more thrusting power. You just won't be able to see her boobs, and you'll be staring at her vagina. You could even play with her while you're down there.

The whole key to a good face riding is to make sure that you don't choke the girl, and the girl doesn't allow you to choke her. Unless you're into choking, but that's a whole other topic, entirely.

Whenever you are about to orgasm, the easiest thing is just to pull out and shoot it on her chest. You can make her swallow, if she's willing to swallow, but in that position it is very, very, very difficult, only because gravity is working against you.

Cum doesn't naturally fly down a person's throat. It's possible, but much more difficult. Usually, all of the cum will build up in her mouth, so she's going to have to sit up, get over the head rush, and

then swallow. It's just easier to pull out and shoot it on her chest and stomach.

And if a girl's not willing to accept that, then she's probably not willing to face fuck anyway. So it wouldn't really matter, would it?

Other than that, one of my favorite things is to use a flavored lubricant. Not only does it make your penis move in and out a lot easier, but it tastes great, and a lot of women aren't too turned on by the taste of sweaty cock.

With these strategies, you should have a good handle on some of the "do's" and "don'ts" involved when it comes to rougher oral sex practices. Remember, it's all about experimentation, practice and discovering what you enjoy the most.
